

MK35/MK35N

Socket A

AMD Athlon XP / Duron Processor

Based DDR Main Board

User's Manual

WARNING

Thermal issue is highly essential for processors with a speed of 600MHz and above. Hence, we recommend you to use the CPU fan qualified by AMD or motherboard manufacturer. Meanwhile, please make sure CPU and fan are securely fastened well. Otherwise, improper fan installation not gets system unstable but also could damage both CPU and motherboard because insufficient thermal dissipation.

If you would like to know more about thermal topic please see **AMD website** for detailed thermal requirement through the address:

1 INTRODUCTION

1.1 To Different Users

First-Time DIY System Builder

Welcome to the DIY world! Building your own computer system is not as difficult as you may think. To make your first computer DIY experience successful, right from the start, we have designed the **Chapter 3 Hardware Installation** section in a step-by-step fashion for all the first-time DIY system builders. Prior to installation, we also suggest you to read the whole manual carefully to gain a complete understanding of your new MK35/MK35N mainboard.

Experienced DIY User

Congratulate on your purchase of the MK35/MK35N mainboard. You will find that installing your new MK35/MK35N mainboard is just easy. Bundled with an array of onboard functions, the highly-integrated MK35/MK35N mainboard provides you with a total solution to build the most stable and reliable system. Refer to sections **3.2 Jumper Settings** and **Chapter 4 Software Utility** to find out how to get the best out of your new mainboard. **Chapter 5 BIOS Setup** also contains the relevant information on how to tune up your system to achieve higher performance.

System Integrator

You have wisely chosen MK35/MK35N to construct your system. MK35/MK35N incorporates all the state-of-the-art technology of the KM266 chipset from VIA. It integrates the most advanced functions you can find to date in a compact Micro ATX mainboard.

This manual adopted in MK35 and MK35N mainboards at the same time. The difference between MK35 and MK35N is that MK35N equips with onboard LAN Controller. In the manual, if there are some standards, characters, equipment or software only appeared or adopted by MK35N; it will be mentioned (**MK35N only**)

1.2 Item Checklist

Check all items with you MK35/MK35N mainboard to make sure nothing is missing. The complete package should include:

- * One piece of MK35/MK35N Mainboard

- * One piece of ATA133/100/66 Ribbon Cable

- * One piece of Floppy Ribbon Cable

- * IO Shielding

- * MK35/MK35N User's Manual

- * One piece of Bundled CD-ROM with containing:

- MK35/MK35N user's manual on PDF format
- VIA 4-IN-1 driver
- VIA Audio driver
- VGA driver
- LAN driver (MK35 N only)
- USB 2.0 Driver
- Award Flashing Utility

2 FEATURES

MK35/MK35N mainboard is carefully designed for the demanding PC user who wants high performance and maximum intelligent features in a compact package.

2.1 Specifications

* CPU Support

Support Socket462 package CPU
AMD Athlon Processor with 200/266 MHz FSB
AMD Duron Processor with 200/266 MHz FSB
AMD Athlon XP Processor with 266 MHz FSB

* Onboard Lan (MK35N only)

Realtek 8100, supports 10/100 Mb/s operation.

* Chipset

Features VIA KM266, N.B. and VT8235 S.B. Chipset.

* Jumperless CPU Configuration

Soft-configuration FSB (The FSB speed is software configurable at 100MHz and 133MHz).

* AC'97 Link for Audio and Telephony CODEC

AC'97 2.2 compliant.
Spread independent PCI functions for Audio and Modem.

* Versatile Memory Support

Two **184-pin DIMM** slots to support up to 2GB of PC1600 or PC2100 compliant **DDR** SDRAM module.

* PCI Expansion Slot

Provides three 32-bit PCI slots.

* AGP Expansion Slot

Provides one 32-bit AGP slot which supports up to 4X AGP devices.

* CNR Expansion Slots

Provides one CNR (Communication Network Riser) slot.

* 6 USB 2.0 Supported Onboard

➤ 4* USB connectors on back-panel and one set of dual USB ports headers on mid-board.

* IO Interface

Provides a variety of IO interfaces:

- 1* Floppy interface for 3.5-inch FDD with 720KB, 1.44MB, or 2.88MB format or for 5.25-inch FDD with 360K or 1.2MB format.
- 1* PS/2 mouse connector.
- 1* PS/2 Keyboard connector.
- 1* RJ45 LAN connector. (MK35N only)
- 1* DB9 Serial connectors 16550 UART compatible.
- 1* VGA port.
- 1* Infrared communication port.
(Serial port COM2 can also be redirected to an external IrDA Adapter for wireless connection.)
- 1* DB25 Parallel port supporting Standard Parallel Port (SPP), Enhanced Parallel Port (EPP), and Extended Capabilities Port (ECP) data transmission schemes.
- 1* Line-Out port.
- 1* Line-In port.
- 1* Mic-In port.

* PCI Bus Master IDE Controller Onboard

Two UltraDMA **133/100/66** Bus Master Dual-channel IDE ports provide support to a maximum of four IDE devices (one Master and one Slave per channel). The IDE Bus implements the data transfer speed up to **133/100/66** MBsec and also supports Enhanced PIO Modes.

80-pin Cable Backward Compatible Legacy ATAPI Devices, ATAPI IDE CD-ROM, CD-R, CD-RW, and LS-120 Supports.

* ATX Power Supply Connector

ATX power supply unit can be connected to the onboard 20-pin ATX power connector, supporting Suspend and Soft-OnOff by dual-function power button.

* Advanced Configuration and Power Interface

Features four power saving modes: Snoop, Suspend to RAM, Suspend to Disk, and Soft-Off. ACPI provides more efficient Energy Savings Features controlled by your operating system that supports OS Direct Power Management (OSPM) functionality.

* **System BIOS**

Provides licensed Award BIOS V6.0 PG on 2Mb Flash EEPROM and supports Green PC, Desktop Management Interface (DMI).

* **Micro ATX Form Factor**

System board conforms to the Micor ATX specification.

Board dimension: 244mm*230mm.

* **Advanced Features**

- **Dual Function Power Button** - The system can be in one of two states; one is Suspend mode and the other is Soft-Off mode. Pushing the power button for less than 4 seconds places the system into Suspend mode. When the power button is pressed for longer than 4 seconds, the system enters the Soft-Off mode.
- **Modem Ring Power-On** - The system can be powered on automatically by the activation of modem ring.
- **CPU Clock Setting** - This item allows users to adjust CPU Host Clock in BIOS.

* **Intelligent Features**

- **Voltage Monitoring** - Monitors various voltages of key elements, such as the CPU, and other critical system voltage levels to ensure stable current passing through mainboard components. System voltages include Vcore on CPU, +2.5V, +3.3V, +5V, +12V and Battery on system etc.
- **Fan Status Monitoring** - To prevent CPU from overheating, the CPU fan is monitored for RPM and failure. (CPU Cooling FAN with RPM sensor is required.)
- **Temperature Monitoring** - This item allows users to make sure whether the CPU or system runs in a suitable temperature.

3 HARDWARE INSTALLATION

Before removing or installing any of these devices including CPU, DIMMs, Add-On Cards, Cables, please make sure to unplug the onboard power connector.

This section outlines how to install and configure your MK35/MK35N mainboard. Refer to the following mainboard layout to help you identify various jumpers, connectors, slots, and ports. Then follow these steps to guide you through a quick and correct installation of your system.

3.1 Step-by-Step Installation

Accessories Of MK35/MK35N

Step 1

Install the CPU:

1. Locate the CPU ZIF (Zero Insertion Force) socket on the upper-right sector of your mainboard (between the back-panel connectors and the DIMM memory slots).
2. Pull the CPU ZIF socket lever slightly sideways away from the socket to unlock the lever, and then bring it to an upwardly vertical position.
3. Place your AMD 462 Athlon/ Duron processor in the socket A. Note that the CPU edges have been purposely designed non-symmetrically to prevent from inserting the processor in the wrong direction. The following diagram demonstrates the correct placement of the CPU in the ZIF socket. You can see that the two blunt-edged corners should face towards the socket-lever.

4. Slightly push the AMD 462 Athlon/ Duron processor into the socket without applying excessive force while making sure there is no gap between CPU and socket. Then lower the socket-lever all the way down to its horizontal position and lock it to secure the CPU in place.
5. The AMD 462 Athlon/ Duron processor requires a set of cooler to ensure proper cooling of the processor. If cooler have not been already mounted on your CPU, you must purchase a cooler separately and have it installed. Plug the cable through the cooler in the CPU fan power connector located nearby. Note that there are several types of CPU fan connectors. Normally, if your mainboard supports the hardware monitoring function, a 3-pin fan power connector should allow your system to detect the CPU fan's speed. The CPU fan can also run with a 2-pin fan power connector, however, detection of CPU fan's speed is not supported. Another type of CPU fan may feature a large 4-pin fan power connector, which does not support CPU fan's speed detection and must be directly connected to the system's power supply unit.

Step 2.

Set Jumpers

The default jumper settings have been set for the common usage standard of this mainboard. Therefore, you do not need to reset the jumpers unless you require special adjustments as in any of the following cases:

1. Clear CMOS
2. BIOS Protection
3. CPU Frequency

For first-time DIY system builders, we recommend that you do not change the default jumper settings if you are not totally familiar with mainboard configuration procedures. The factory-set default settings are tuned for optimum system performance. For the advanced users who wish to customize their system, section **3.2 Jumper Settings** will provide detailed information on how to configure your mainboard manually.

Step 3.

Install DDR SDRAM System Memory

To install memory, insert DDR SDRAM memory module(s) in any one or two or two DIMM banks. Note that DDR SDRAM modules are directional and will not go in the DIMM banks if they are not properly oriented. After the module is fully inserted into the DIMM bank, lift the clips of both sides of the DIMM bank to lock the module in place.

Step 4

Install Internal Peripherals in System Case

Before you install and connect the mainboard into your system case, we recommend that you first assemble all the internal peripheral devices into the computer housing, including but not limited to the hard disk drive (IDE HDD), floppy disk drive (FDD), CD-ROM drive, and ATX power supply unit. This will greatly facilitate in making the connections to the mainboard described below.

To install IDE & FDD drives, follow this procedure:

1. Set the required jumpers on board each device according to the instructions provided by the manufacturer. (IDE devices, HDD, and CD-ROM have to set jumpers on Master or Slave mode depending on your willing to install more than one device for each kind.)
2. Connect IDE cable and FDD cable on the back-panel of the internal peripheral devices to the corresponding headers on board. Note that the cable should be oriented with its colored stripe (usually in red or magenta) connected to pin#1 both on the mainboard IDE or FDD connector and on the device as well.
3. Connect an available power cable through your system power supply unit to the back-panel of each peripheral device. Note that the power cable is directional and cannot fit in if not properly positioned.

Step 5

Mount the Mainboard on the Computer Chassis

1. You may find that there are a lot of different mounting hole positions both on your computer chassis and on the mainboard. To choose a correct mounting hole, the key point is to keep the back-panel of the mainboard in a close fit with your system case, as shown below.

2. After deciding on the proper mounting holes, position the studs between the frame of chassis and the mainboard. The studs are used to fix the mainboard and to keep a certain distance between the system chassis and the mainboard, in order to avoid any electrical short between the board and the metal frame of chassis. (If your computer case is already equipped with mounting studs, you will need to tighten screws to attach the mainboard.)

Note: In most computer housings, you will be able to find 4 or more attachment points to install mounting studs and fix the mainboard. If there aren't enough matching holes, then make sure to install at least 4 mounting studs to ensure proper attachment of the mainboard.

Step 6

Connect Front-Panel Switches/LEDs/Speaker/USB connectors

You can find there are several different cables already existing in the system case and originating from the computer's front-panel devices (HDD LED, Power LED, Reset Switch, PC Speaker, or USB devices etc.) These cables serve to connect the front-panel switches, LEDs, and USB connectors to the mainboard's front-panel connectors group (PANEL1), as shown below.

1. PANEL1

- (1). HDD_LED (HDLED)
- (2). Power_LED (GRNLED)
- (3). Hardware Reset Switch Button (RST)
- (4). ATX Soft Power On/Off (PWRSW)

2. USB 3

3. SPEAKER (SPEAKER 1)

Step 7

Connect IDE & Floppy Disk Drives

1. IDE cable connector

2. FDD cable connector

Step 8

Connect Other Internal Peripherals

1. CD1 and Front-Panel AUDIO1 connectors

2. IR connector(IR1)

Step 9

Connect Power Supply

1. System power connector

Step 10

Install Add-on Cards in Expansion Slots

1. AGP Card

2. PCI Card

3. CNR Card

Step 11

Connect External Peripherals to Back-Panel

You are now ready to put the computer case back together and get on to the external peripherals connections to your system's back-panel.

1. PS/2 Mouse and Keyboard Ports

2. Parallel Port

3. COM1 Port

4. VGA Port

5. USB0 / USB1 Port Connectors

6. USB2 / USB3 Port Connectors

7. LAN Port(MK35N only)

8. Line-In Port , Line-out Port and Mic-In Port

Step 12

Install Driver & Software Components

Please note that all the system utilities and drivers are designed for Win 9x / 2000/ME/NT operating systems . Make sure your operating system is already installed before running the drivers installation CD-ROM programs.

1. Insert the MK35/MK35N bundled CD-ROM into your CD-ROM drive.
The auto-run program will display the drivers main installation window on screen.
2. Select the Mainboard related program.
3. Install VIA 4-in-1 and AC97 Sound drivers.
4. Install VIA onchip VGA drivers.
5. Install LAN driver.(MK35N only)
6. Exit from the auto-run drivers installation program.

3.2 Jumper Settings

Several hardware settings are made through the use of jumper caps to connect jumper pins to the mainboard. Pin #1 could be located at any corner of each jumper; you just find a location marked with a white right angle, which stands for pin 1#. There are several types of pin 1# shown as below:

3-pin and multi-pin (> 3) jumpers show as follows:

Pin #1 to the left:

Pin #1 on the top:

Pin #1 to the right:

Pin #1 on the bottom:

Jumpers with two pins are shown as  for Close [On] or  for Open [Off]. To Short jumper pins, simply place a plastic jumper cap over the desired pair of pins.

Caution!

1. Do not remove the mainboard from its antistatic protective packaging until you are ready to install it.
2. Carefully hold the mainboard by its edges and avoid touching its components. When putting the mainboard down, place it on the top of its original packaging film and on an even surface, and components side up.
3. Wear an antistatic wrist strap or take other suitable measures to prevent electrostatic discharge (ESD) whenever handling this equipment.

Jumper & Connector Guide

Use the mainboard layout on page 11 to locate CPU socket, memory slots, expansion slots, jumpers and connectors on the mainboard during installation. The following list will help you identify jumpers, slots, and connectors along with their assigned functions:

CPUMemoryExpansion Slots

Socket 462 : CPU Socket for AMD Athlon and Duron processors.

DIMM1/ 2 : Two DIMM Slots for 128, 256, 512 MB, and 1GB of 2.5V DDR SDRAM

(The total installed memory does not exceed 2GB)

AGP : One AGP (Accelerated Graphics Port) Slot

PCI : Three 32-bit PCI Expansion Slots

CNR : One Communication Network Riser Slot

Jumpers

- A1** JP3 : BIOS Flash Protect Jumper
- A2** JP1 : Clear CMOS Jumper
- A3** JP5 : CPU Frequency Jumper

Back-Panel Connectors

- B1** PSKBM1 : PS/2 Keyboard
- B1** PSKBM1 : PS/2 Mouse
- E2** COM1 : Serial Port 1 Connector(DB9 male)
- B3** VGA1 : VGA Port (DB15 female)
- B4** PRINTER : Parallel Port (DB25 female)
- B5~B6** USB : 2 USB Ports
- B7~B8** USB : 2 USB Ports
- B9** LAN1 : RJ45 LAN Port (MK35N only)
- B10** JS1 : Line-in Port
- B11** JS1 : Line-out Port
- B12** JS1 : Mic-in Port

Front-Panel Connectors

- C1** PWRSW : ATX power on/off momentary type switch
- C2** GRN LED : Green LED
- C3** HD LED : IDE drive active LED
- C4** PST : Hardware Reset Switch
- C5** SPEAKER 1 : Speaker Header
- C6** USB3 : Extended dual USB Ports Header (USB Port4/5)

Internal Peripherals Connectors

- D1** FDD : Floppy Disk Drive Interface
- D1** IDE1 : IDE Primary Interface (Dual-channel)
- D1** IDE2 : IDE Secondary Interface (Dual-channel)

Other Connectors:

- E1** ATX1 : ATX Power Header (20-pin header)
- E2** CPUFAN1 : CPU Fan Power
- E3** CASFAN1 : Case Fan Power
- E4** COM2 : On board Serial port 2 header.
- E5** Audio 1 : Front-oriented microphone/line-out port header
- E6** CD1 : On board audio Header
- E7** IR1 : IR Header

Jumpers

A1 BIOS Write Protection (JP3)

JP3 is used to protect BIOS from abnormal writing.

You may choose to place mini jumper on pins 2-3 for BIOS write protection; however, please place mini jumper on pins 1-2 if you need to reflash BIOS.

To enable reflashing the BIOS
Pin 1-2 (Default)

BIOS write protection
Pin 2-3

A2 Clear CMOS (JP1)

JP1 is used to clear CMOS data. Clearing CMOS will result in the permanent erasing of previous system configuration settings and the restoration of original (factory-default) system settings.

Pin 1-2 (Default, Normal)

Pin 2-3 (Clear CMOS)

A3 CPU Frequency (JP5)

JP5 is set the CPU frequency (100MHz or 133 MHz) according to the CPU. You may choose to place mini jumper on pins 1-2 for 100MHz; however, please place mini jumper on pins 2-3 if you need to run 133MHz.

☞ **Back-Panel Connectors**

B1 PS/2 Keyboard & PS/2 Mouse Connectors

Two 6-pin female PS/2 keyboard & Mouse connectors are located at the rear panel of the mainboard. Depending on the computer housing you use (desktop or tower), the PS/2 Mouse connector is situated at the top of the PS/2 Keyboard connector when the mainboard is laid into a desktop, as opposed to a tower where the PS/2 Mouse connector is located at the right of the PS/2 Keyboard's. Plug the PS/2 keyboard and mouse jacks into their corresponding connectors.

E2 COM1 Port Connector

This mainboard can accommodate one serial device on COM1 Port.

E3 VGA Connector

One 15pin VGA connector is located at the rear panel of the mainboard.

E4 Parallel Port Connector

One DB25 female parallel connector is located at the rear panel of the mainboard. Plug the connection cable from your parallel device (printer, scanner, etc.) into this connector.

B5-B6 USB Port Connectors

This mainboard offers USB port . Plug each USB device jack into an available USB0/USB1 connectors.

B7-B8 USB Port Connectors

This mainboard offers USB port. Plug each USB device jack into an available USB2/USB3 connectors.

B9 LAN Port Connector(MK35N only)

This mainboard can accommodate one device on LAN. Attach a 10/100 baseT cable to the RJ45 at the back-panel of your computer.

B10 Line-In Port

Line-In is a stereo line-level input port that accepts a 1/8-inch TRS stereo plug. It can be used as a source for digital sound recording, a source to be mixed with the output, or both.

B11 Line-Out Port

Line-Out is a stereo output port through which the combined signal of all internal and external audio sources on the board is output. It can be connected to 1/8-inch TRS stereo headphones or to amplified speakers.

B12 Mic-In Port

MIC-IN is a 1/8-inch jack that provides a mono input. It can use a dynamic mono or stereo microphone with a resistance of not more than 600 Ohms.

☞ Front-Panel Connectors

① HDD LED Connector (HD LED)

Attach the connector cable from the IDE device LED to the 2-pin HD LED header. The HDD LED lights up whenever an IDE device is active.

② Green LED Connector (GRN LED)

The Green LED (GRN LED) indicates that the system is currently in one of the power saving mode (Doze//standby/Suspend). When the system resumes to normal operation mode, the Green LED will go off. Attach a 2-pin Green LED cable to GRN LED header.

Note:

Please note all the LED connectors are directional. If your chassis's LED does not light up during running, please simply change to the opposite direction.

③ Hardware Reset Connector (RST)

Attach the 2-pin hardware reset switch cable to the Reset Switch header. Pressing the reset switch causes the system to restart.

Ⓒ4 ATX Power On/Off Switch Connector (PWRSW)

The Power On/ Off Switch is a momentary-type switch used for turning on or off the system's ATX power supply. Attach the connector cable from the Power Switch to the 2-pin Power Switch header on the mainboard.

Ⓒ5 Speaker Connector (SPEAKER1)

Attach the PC speaker cable from the case to the 4-pin speaker connector (SPEAKER1).

<table border="0"> <tr><td>1</td><td>■</td></tr> <tr><td>2</td><td>■</td></tr> <tr><td>3</td><td>■</td></tr> <tr><td>4</td><td>■</td></tr> </table>	1	■	2	■	3	■	4	■	<p>Pine Assignment:</p> <p>1 = Signal</p> <p>2 = NC</p> <p>3 = Ground</p> <p>4 = VCC</p>
1	■								
2	■								
3	■								
4	■								

Ⓒ6 Extended USB Header (USB3)

The headers are used to connect the cable attached to USB connectors which are mounted on front-panel or back-panel. But the USB cable is optional at the time of purchase.

Pins Assignment:

- 1 = VERG_FP_USBPWRO
- 3 = USB_FP_PO-
- 5 = USB_FP_PO+
- 7 = GND
- 9 = KEY

- 2 = VERG_FP_USBPWRO
- 4 = USB_FP_P1-
- 6 = USB_FP_P1+
- 8 = GND
- 10 = USB_FP_OC0

☞ **Internal Peripherals Connectors**

Ⓛ Enhanced IDE Ports and Floppy Connector

The MK35/MK35N mainboard features two 40-pin dual-channel IDE device connectors (IDE1/IDE2) providing support to up to four IDE devices, such as CD-ROM and Hard Disk Drives (H.D.D.). This mainboard also includes one 34-pin floppy disk controller to accommodate the Floppy Disk Drive (FDD1). Moreover, this mainboard comes with one 80pin ATA133/100/66 ribbon cable to connect to IDE H.D.D. and one 34-pin ribbon cable for F.D.D. connection.

Important: Ribbon cables are directional, therefore, make sure to always connect with the red cable stripe on the same side as pin #1 of the IDE1/ IDE2 or FDD1 connector on the mainboard.

Other Connectors

E1 ATX Power Supply Connector (ATX1)

Locate the 20-pin male header ATX power connector (ATX1) on your mainboard. Plug the power cable from the ATX power supply unit directly into (ATX1) ATX power supply connector.

Note 1: The ATX power connector is directional and will not go in unless the guides match perfectly making sure that pin#1 is properly positioned.

Note 2: Make sure the latch of the ATX power connector clicks into place to ensure a solid attachment.

Note 3: Your ATX power supply must be supplied to ACPI +5V standby power and at least 720mA compatible.

Note 4: Make sure your power supply have enough power for higher speed processor installed.

E2~E3 Cooling Fan Connectors for CPU (CPUFAN1) and Case (CASFAN1) Fans

The mainboard provides two onboard 12V cooling fan power connectors to support CPU (CPUFAN1) and Case (CASFAN1) cooling fans.

Note: Both cable wiring and type of plug may vary depending on the fan maker. Keep in mind that the red wire should always be connected to the +12V header, and the black wire, to the ground (GND) header.

E4 COM2 Connector (COM2)

This mainboard built in with one 10-pin header for Serial 2 port (COM2).

Pin Assignment:

1 = DCD	2 = RxD
3 = TxD	4 = DTR
5 = GROUND	6 = DSR
7 = RTS	8 = CTS
9 = RI	10 = KEY

E5 Front panel Microphone and Line_out Header (AUDIO1)

This header allows the user to install auxiliary front-panel1 microphone and line-out ports for easier access. When frontpanel Microphone and line-out ports are not used, make sure to place two attached mini jumpers to the right position shown as below.

Pins Assignment:

1 = AUD_MIC	2 = AUD_GND
3 = MIC_MIC_BIAS	4 = AUD_VCC
5 = AUD_FPOUT_R	6 = AUD_RET_R
7 = HP_ON	8 = KEY
9 = AUD_FPOUT_L	10 = AUD_RET_L

E6 Audio CD_IN Connector (CD1)

Port CD1 is used to attach an audio connector cable from the CD-ROM drive.

E7 IR Header (IR1)

If you have an Infrared device, this mainboard can implement SIR (Standard IR) transfer function. To enable the IR transfer function, follow these steps:

Pins Assignment:

1 = NC

2 = KEY

3 = +5V

4 = GND

5 = IRTX

6 = IRRX

3.3 System Memory Configuration

The MK35/MK35N mainboard has two 184-pin DIMM banks that allow you to install from 128MB up to 2GB of system memory.

Each **184-pin** DIMM (Dual In-line Memory Module) bank can accommodate 128MB, 256MB, 512MB, and 1GB of PC1600/PC2100 compliant 2.5V single or double side 64-bit wide data path DDR SDRAM modules.

1. Install Memory:

Install memory in any or all of the banks. The combination shown as follows.

DIMM Slot	Memory Modules	Module Quantity
DIMM 1	128MB, 256MB, 512M and 1GB, 184-pin 2.5V DDR SDRAM DIMM	x 1
DIMM 2	128MB, 256MB, 512M and 1GB, 184-pin 2.5V DDR SDRAM DIMM	x 1

Maximum installed memory is 2GB.

Note: You do not need to set any jumper to configure memory since the BIOS utility can detect the system memory automatically. You can check the total system memory value in the BIOS Standard CMOS Setup menu.

2. Upgrade Memory:

You can easily upgrade the system memory by inserting additional DDR SDRAM modules in available DIMM banks. The total system memory is calculated by simply adding up the memory in all DIMM banks. After upgrade, the new system memory value will automatically be computed and displayed in the field "Standard CMOS Setup" of BIOS setup program.

4 SOFTWARE UTILITY

4.1 Mainboard CD Overview

Note: The CD contents attached in the MK35/MK35N mainboard are subject to change without notice.

To start your mainboard CD disc, just insert it into your CD-ROM drive, and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click or run D:\Autorun.exe (assuming that your CD-ROM drive is drive D:)

Navigation Bar Description:

- ☞ **Install Mainboard MK35 Driver** - Installing
- ☞ **Install Mainboard MK35N Driver** - Installing
- ☞ **Manual** - MK35/MK35N Series mainboard user's manual in PDF format.
- ☞ **Link to Shuttle Homepage** -Link to shuttle website homepage.
- ☞ **Browse this CD** - Allows you to see the contents of this CD.
- ☞ **Quit** - Close this CD.

4.2 Install Mainboard Software

Insert the attached CD into your CD-ROM drive and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click on Autorun icon in **My Computer** to bring up **Mainboard Software Setup** screen.

Select using your pointing device (e.g. mouse) on the "**Install Mainboard MK35 Software**" or "**Install Mainboard MK35N Software**" bar to run into sub-menu.

The **Mainboard MK35 Software** include:

- [4.2.A] Install VIA Chipset Driver
- [4.2.B] Install VGA Device Driver
- [4.2.C] Install Audio Driver
- [4.2.E] Install USB 2.0 Driver

The **Mainboard MK35N Software** include:

- [4.2.A] Install VIA Chipset Driver
- [4.2.B] Install VGA Device Driver
- [4.2.C] Install Audio Driver
- [4.2.D] Install LAN Driver
- [4.2.E] Install USB 2.0 Driver

4.2.A Install VIA Chipset Driver

Select using your pointing device (e.g. mouse) on the "Install VIA Chipset Driver" bar to install VIA chipset driver.

MK35

MK35N

Once you made your selection, a Setup window runs the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.B Install VGA Device Driver

Select using your pointing device (e.g. mouse) on the "**Install VGA Device Driver**" bar to install VGA chipset driver.

MK35

MK35N

Once you made your selection, a Setup window run the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.C Install Audio Driver

Select using your pointing device (e.g. mouse) on the "Install Audio Driver" bar to install AC'97 Audio driver.

MK35

MK35N

Once you made your selection, a Setup window runs the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.D Install LAN Driver (MK35N Only)

Select using your pointing device (e.g. mouse) on the "Install LAN Driver" bar to install LAN driver.

MK35N

Once you made your selection, a Setup window run the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.E Install USB 2.0 Driver

Select using your pointing device (e.g. mouse) on the "Install USB 2.0 Driver" bar to install USB 2.0 driver.

MK35

MK35N

Once you made your selection, a Setup window runs the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.3 View the User's Manual

Insert the attached CD into your CD-ROM drive, and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click on Autorun icon in **My Computer** to bring up **Shuttle Mainboard Software Setup** screen.

Select the item using your pointing device (e.g. mouse) on the "**Manual**" bar.

Then **Online Information** windows will appear on the screen. Click on the "**Install Acrobat Reader**" bar if you need to install acrobe reader.

Then click on "**MK35/MK35N Manual**" bar to view MK35/MK35N user's manual.

5 BIOS SETUP

MK35/MK35N BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This information is stored in battery-backed RAM so that it retains the Setup information even if the system power is turned off.

The system BIOS is managing and executing a variety of hardware related functions in the system, including:

System date and time

Hardware execution sequence

Power management functions

Allocation of system resources

5.1 Enter the BIOS

To enter the BIOS (Basic Input/ Output System) utility, follow these steps:

- Step 1.** Power on the computer, and the system will perform its POST (Power-On Self Test) routine checks.
- Step 2.** Press key immediately, or at the following message:
"Press DEL to enter SETUP " or simultaneously press
<Ctrl>, <Alt>, <Esc> keys

Note 1. If you miss trains of words mentioned in step2 (the message disappears before you can respond) and you still wish to enter BIOS Setup, restart the system and try again by turning the computer OFF and ON again or by pressing the <RESET> switch located at the computer's front-panel. You may also reboot by simultaneously pressing the <Ctrl>, <Alt>, keys.

Note 2. If you do not press the keys in time and system does not boot, the screen will prompt an error message, and you will be given the following options:

"Press F1 to Continue, DEL to Enter Setup"

- Step 3.** As you enter the BIOS program, the CMOS Setup Utility will prompt you the Main Menu, as shown in the next section.

5.2 The Main Menu

Once you enter the AwardBIOS(tm) CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to accept and enter the sub-menu.

Note that a brief description of each highlighted selection appears at the bottom of the screen.

Setup Items

The main menu includes the following main setup categories. Recall that some systems may not include all entries.

Standard CMOS Features

Use this menu for basic system configuration.

Advanced BIOS Features

Use this menu to set the Advanced Features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system's performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals.

Power Management Setup

Use this menu to specify your settings for power management.

PnP / PCI Configurations

This entry appears if your system supports PnP/ PCI.

PC Health Status

This entry shows the current system temperature, Voltage, and FAN speed.

Frequency/ Voltage Control

Use this menu to specify your settings for frequency/ voltage control.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal stable performance of your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory-set for optimal performance system operation. While Award has designed the custom BIOS to maximize performance, the factory has the right to change these defaults to meet users' needs.

Set Supervisor / User Password

Use this menu to change, set, or disable supervisor/ user password. It allows you to limit access to the system and BIOS Setup, program.

Save & Exit Setup

Save CMOS value changes in CMOS and exit from setup.

Exit Without Saving

Abandon all CMOS value changes and exit from setup.

☞ **Standard CMOS Features**

The items in Standard CMOS Setup Menu are divided into 10 categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

Date

<mm> <dd> <yy>

Set the system date. Note that the 'Day' automatically changes when you set the date.

Time

<hh : mm : ss>

The time is converted based on the 24-hour military-time clock. For example, 5 p.m. is 17:00:00.

IDE Primary Master

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Primary Slave

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Secondary Master

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Secondary Slave

Options are in its sub menu.

Press <Enter> to enter the sub-menu of detailed options.

Drive A Drive B

Select the type of floppy disk drive installed in your system.

- The choice: None, 360K, 5.25 in, 1.2M, 5.25 in, 720K, 3.5 in, 1.44M, 3.5 in, or 2.88M, 3.5 in

Video

This item defines the video mode of the system. This mainboard has a built-in VGA graphics system; you must leave this item at the default value.

- The choice: EGA/VGA, CGA 40, CGA 80, or MONO

Halt On

Select the situation in which you want the BIOS to stop the POST process and notify you.

- The choice: All Errors, No Errors, All, But Keyboard, All, But Diskette, or All, But Disk/Key

Base Memory

Displays the amount of conventional memory detected during boot up.

Extended Memory

Displays the amount of extended memory detected during boot up.

Total Memory

Displays the total memory available in the system.

IDE Adapters

The IDE adapters control the hard disk drive. Use a separate sub-menu to configure each hard disk drive.

IDE HDD Auto-Detection

Press <Enter> to auto-detect HDD on this channel. If detection is successful, it fills the remaining fields on this menu.

- Press Enter

IDE Primary Master

Selecting 'manual' lets you set the remaining fields on this screen and select the type of fixed disk. "User Type" will let you select the number of cylinders, heads, etc., Note: PRECOMP = 65535 means NONE!

- The choice: None, Auto, or Manual.

Access Mode

Choose the access mode for this hard disk.

- The choice: CHS, LBA, Large, or Auto.

Capacity

Disk drive capacity (Approximated). Note that this size is usually slightly greater than the size of a formatted disk given by a disk checking program.

- Auto-Display your disk drive size.

The following options are selectable if the 'IDE Primary Master' item is set to 'Manual'

Cylinder

Set the number of cylinders for this hard disk.

- Min = 0, Max = 65535

Head

Set the number of readwrite heads.

- Min = 0, Max = 255

Precomp

Warning: Setting a value of 65535 means no hard disk.

➤ Min = 0, Max = 65535

Landing zone

Set the Landing zone size.

➤ Min = 0, Max = 65535

Sector

Number of sector per track.

➤ Min = 0, Max = 255

Advanced BIOS Features

This section allows you to configure your system for basic operation. You have the opportunity to select the system's default speed, boot-up sequence, keyboard operation, shadowing, and security.

Anti-Virus Protection

When enabled, this item provides protection against viruses that try to write to the boot sector and partition table of your hard disk drive. You need to disable this item when installing an operating system. We recommend that you enable this item as soon as you have installed an operating system.

Note : For complete protection against viruses,install virus software in your operating system and update the virus definitions regularly.

CPU Internal Cache

All processors that can be installed in this mainboard use internal level 1 (L1) cache memory to improve performance. Leave this item at the default value for better performance.

- The choice: Disabled or Enabled

External Cache

Most processors that can be installed in this system use external level 2 (L2) cache memory to improve performance. Leave this item at the default value for better performance.

- The choice: Disabled or Enabled

CPU L2 Cache ECC Checking

This item enables or disables ECC (Error Correction Code) error checking on the CPU cache memory. We recommend that you leave this item at the default value.

- The choice: Enabled or Disabled.

Processor Number Feature

Allows you to make Pentium III Processor Serial Number enabled/disabled.

- The choice: Enabled, or Disabled.

Quick Power On Self Test

This item speeds up Power-On Self Test (POST) after you power on the computer. If it is set to enabled, BIOS will shorten or skip some check items during POST.

- The choice: Disabled or Enabled

First/Second/Third Boot Device

The BIOS attempts to load the operating system from the devices in the sequence selected in these items.

- The Choice: Floppy, LS120, HDD-0, SCSI, CDROM, HDD-1, HDD-2, HDD-3, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, ZIP100, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD LAN, or Disabled.

Boot Other Device

Select Your Boot Device Priority.

- The choice: Disabled or Enabled

Swap Floppy Drive

If the system has two floppy drives, you can swap the logical drive name assignment.

- The choice: Disabled or Enabled

Boot Up Floppy Seek

Seeks disk drives during boot-up. Disabling speed boots up.

- The choice: Disabled or Enabled

Boot Up NumLock Status

This item defines if the keyboard Num Lock key is active when your system is started.

- The choice: Off or On.

Gate A20 Option

This entry allows you to select how the gate A20 is handled. The gate A20 is a device used for above 1MByte of address memory. Initially, the gate A20 was handled via a pin on the keyboard. Today, while a keyboard still provides this support, it is more common and much faster in setting to Fast for the system chipset to provide support for gate A20.

- The choice: Normal, or Fast.

ATA 66/100 IDE Cable Msg

Enable or disables the ATA 66/100 IDE Cable Msg. This message will appear during reboot when you use 40-pin cable on your 66/100 hard disks.

- The choice: Enabled or Disabled.

Typematic Rate Setting

Keystrokes repeat at a rate determined by the keyboard controller. When this controller enabled, the typematic rate and typematic delay can be selected.

- The choice: Disabled or Enabled

Typematic Rate (Chars/Sec)

This item sets how many times the keystroke will be repeated in a second when you hold the key down.

- The choice: 6, 8, 10, 12, 15, 20, 24, or 30.

Typematic Delay (Msec)

Sets the delay time after the key is held down before it begins to repeat the keystroke.

- The choice: 250, 500, 750, or 1000.

Security Option

Select whether the password is required every time the system boots or when you enter setup.

System The system will not boot and access to Setup will be denied if the correct password is not entered promptly.

Setup The system will boot, but access to Setup will be denied if the correct password is not entered promptly.

➤ The choice: Setup or System .

Note: To disabled security, select PASSWORD SETTING at Main Menu, and then you will be asked to enter password. Do not type anything and just press <Enter > ; it will disable security. Once the security is disabled, the system will boot, and you can enter Setup freely.

APIC Mode(Enabled)

This item allows you to enable APIC (Advanced Programmable Interrupt Controller) functionality. APIC is an Intel chip that provides symmetric multiprocessing (SMP) for its Pentium systems.

➤ The choice: Disabled or Enabled

OS Select For DRAM > 64MB

Selects the operating system that is running with greater than 64MB of RAM in the system.

➤ The choice: Non-OS2 or OS2.

HDD S.M.A.R.T Capability

This item enable/disable the HDD system management function.

➤ The choice: Disabled or Enabled

Video BIOS Shadow

Determines whether video BIOS will be copied to RAM. However, it is optional depending on chipset design. Video Shadow will increase the video speed.

➤ The choice: Disabled or Enabled

Small Logo (EPA) Show

This item allows you to enable disable the EPA Logo.

➤ The choice: Disabled or Enabled

☞ **Advanced Chipset Features**

These items define critical timing parameters of the mainboard. You should leave the items on this page at their default values unless you are very familiar with the technical specifications of your system hardware. If you change the values incorrectly, you may introduce fatal errors or recurring instability into your system.

DRAM Clock/ Drive Control

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

Current FSB Frequency

This item shows current CPU Front Side Bus speed.

Current DRAM Frequency

This item shows current DRAM speed.

DRAM Clock

This item allows you to control the DRAM speed.

➤ The Choice: 100MHz, 133MHz, or By SPD.

When CPU speed set to 100MHz, DRAM speed can be set to 100MHz (by Host Clock), or 133MHz.

When CPU speed set to 133MHz, DRAM speed set to 133MHz (by Host Clock).

DRAM Timing

This item allows you to select the value in this field, depending on whether the board using which kind of DDR DRAM.

- The Choice: By SPD or Manual.

DRAM CAS Latency

This item enables you to select CAS latency time in HCLKs of 2/2 or 3/3. It's set at factory and depends on the DRAM installed. Don't change the value unless you change specifications of the CPU or DRAM installed.

- The Choice: 2.5.or 2

Bank Interleave

The interleave number of internal banks, can be set to 2 way, 4 way interleave or disabled. For VCM and 16Mb type dram chips, the bank interleave is fixed at 2 way interleave.

When the dram timing is selected by SPD, it will be set by the value on SPD of the RAM module(SDR).

- The Choice: Disabled, 2 Bank, or 4 Bank.

Precharge to Active(Trp)

This item allows you to Precharge Command to Active Command Period.

- The Choice: 2T or 3T.

Active to Precharge(Tras)

This item allows you to Active Command to Precharge Command Period.

- The Choice: 5T or 6T.

Active to CMD(Trcd)

This item allows you to Active to CMD.

- The Choice: 2T or 3T .

DRAM Burst Length

- The Choice: 4 or 8

DRAM Queue Depth

- The Choice: 2 level or 4 level or 3 level

DRAM Command Rate

This item allows you to select the DRAM execution rate.

- The Choice: 2T Command or 1T Command .

Press <Esc> to return to the Advanced Chipset Features screen.

AGP & P2P Bridge Control

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

AGP Aperture Size

Select the size of Accelerated Graphics Port (AGP) aperture. The aperture is a portion of the PCI memory address range dedicated to graphics memory address space. Host cycles that hit the aperture range are forwarded to the AGP without any translation.

- The Choice: 256M, 128M, 64M, 32M, 16M, 8M or 4M .

AGP Mode

- The Choice: 4X, 2X, 1X

AGP Driving Control

This item enables the system to automatically select its output buffer drive strength or make it manually selectable by an end user.

- The Choice: Auto or Manual.

AGP Driving Value

This item enables an end user to manually select the AGP output buffer drive strength.

- Key in a HEX number: Min = 0000, Max = 00FF.

AGP Fast Write

This item enables an end user to manually select the AGP output buffer drive strength.

- The Choice: Disabled or Enabled .

AGP Master 1 WS Write

When this item is enabled, writing to the AGP (Accelerated Graphics Port) is executed with one wait state.

- The Choice: Disabled or Enabled .

AGP Master 1 WS Read

When this item enabled, reading from the AGP (Accelerated Graphics Port) is executed with one wait state.

➤ The Choice: Disabled or Enabled .

Press <Esc> to return to the Advanced Chipset Features screen.

CPU & PCI Bus Control

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

PCI1 Master 0 WS Write

When this item enabled, writing to the PCI bus is executed with zero wait state.

➤ The Choice: Enabled or Disabled.

PCI2 Master 0 WS Write

When this item enabled, writing to the AGP bus is executed with zero wait state.

➤ The Choice: Enabled or Disabled.

PCI1 Post Write

This Item enable/disable AGP post write function, which means when cpu accessing the AGP data, the chipset can queue the instruction when the AGP bus is busy, then write the data when AGP bus is available .

➤ The Choice: Disabled or Enabled .

PCI2 Post Write

This Item enable/disable PCI post write function, which means when cpu accessing the PCI data, the chipset can queue the instruction when the PCI bus is busy, then write the data when AGP bus is available.

➤ The Choice: Disabled or Enabled .

PCI Delay Transaction

The chipset has an embedded 32-bit posted write buffer to support delay transactions cycles. Select Enabled to support compliance with PCI specification version 2.1.

➤ The Choice: Disabled or Enabled .

Press <Esc> to return to the Advanced Chipset Features screen.

Memory Hole

In order to improve performance, some space in memory can be reserved for ISA cards.

- The Choice: Disabled or 15M-16M.

System BIOS Cacheable

Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program is written to this memory area, a system error may result.

- The choice: Disabled or Enabled .

Video RAM Cacheable

Selecting Enabled allows caching of the video RAM , resulting in better system performance. However, if any program is written to this memory area, a system error may result.

- The Choice: Disabled or Enabled .

VGA Share Memory Size

These items allows you to select the shared memory size for VGA usage.

- The Choice: 8M, 16M or 32M.

☞ **Integrated Peripherals**

VIA OnChip IDE Device

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

OnChip IDE Channel0

The chipset contains a PCI IDE interface with support to two IDE channels. Select Enabled to activate the primary IDE interface; select Disabled to deactivate this interface

➤ The choice: Disabled or Enabled .

OnChip IDE Channel1

The chipset contains a PCI IDE interface with support to two IDE channels. Select Enabled to activate the secondary IDE interface; select Disabled to deactivate this interface

➤ The choice:Disabled or Enabled .

IDE Prefetch Mode

The onboard IDE drive interfaces support IDE prefetching for faster drive access. If you install a primary and/or secondary add-on IDE interface, set this field to Disabled if the interface does not support prefetching.

➤ The choice: Disabled or Enabled .

Primary/ Secondary / Master/ Slave PIO

The four IDE PIO (Programmed Input/ Output) fields let you set a PIO mode (0-4) for each of the four IDE devices that the onboard IDE interface supports. Modes 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device.

- The choice: Auto, Mode 0, Mode 1, Mode 2, Mode 3, or Mode 4.

Primary/ Secondary / Master/ Slave UDMA

Ultra DMA100 implementation is possible if your IDE hard drive supports it and the operating environment includes a DMA driver (Windows 95 OSR2 or a third-party IDE bus master driver). If both of your hard drive and your system software support Ultra DMA100, select Auto to enable BIOS support.

- The choice: Disabled or Auto.

Press <Esc> to return to the Advanced Chipset Features screen.

VIA OnChip PCI Device

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

VIA-3058 AC97 Audio

This item allows you to control the onboard AC 97 audio.

- The choice: Auto or Disabled.

VIA-3068 MC97 Modem

This item allows you to control the onboard MC97 modem. Disable this item if you are going to install an external modem.

- The choice: Auto or Disabled.

Press <Esc> to return to the Advanced Chipset Features screen.

Super IO Device

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

Onboard FDC Controller

Select Enabled if your system has a floppy disk controller (FDC) installed on the system board and you want to use it. If you install add-on FDC or the system has no floppy drive, select Disabled in this field.

- The choice: Disabled or Enabled .

Onboard Serial Port1/ Port2

Select an address and corresponding interrupt for the first and second serial ports.

- The choice: Disabled, 3F8IRQ4, 2F8IRQ3, 3E8IRQ4, 2E8IRQ3 or Auto.

Onboard Parallel Port

This item allows you to determine onboard parallel port controller IO address setting.

- The choice:: Disabled, 378IRQ7, 278IRQ5 or 3BCIRQ7 .

Parallel Port Mode

Select an operating mode for the onboard parallel (printer) port. Select Normal, Compatible, or SPP unless you are certain your hardware and software both support one of the other available modes.

- The choice: SPP, EPP, ECP, or ECP + EPP.

ECP Mode Use DMA

Select a DMA channel for the parallel port for use during ECP mode.

- The choice: 1 or 3.

Press <Esc> to return to the Advanced Chipset Features screen.

Init Display First

This item allows you to decide to activate PCI Slot or on-chip VGA first.

- The choice: PCI Slot or AGP.

OnChip USB Controller

This should be enabled if your system has a USB installed on the system board and you want to use it. Even when on chip USB so equipped, if you add a higher performance controller, you will need to disable this feature.

- The Choice: All Disabled, All Enabled, 1&2 USB Port, 2&3 USB Port, 1&3 USB Port, 1 USB Port, 2 USB Port, or 3 USB Port.

USB Keyboard Support

Select Enabled if your system contains a Universal Serial Bus (USB) controller and you have a USB keyboard.

- The Choice: Disabled or Enabled .

USB Mouse Support

Select Enabled if your system contains a Universal Serial Bus (USB) controller and you have a USB Mouse.

- The Choice: Disabled or Enabled .

Onboard PCI LAN

- The Choice: Disabled or Enabled .

Onboard LAN Boot ROM

This item allows you to enable or disable the onboard LAN Boot ROM function.

- The Choice: Enabled or Disabled.

IDE HDD Block Mode

Block mode is also called block transfer, multiple commands, or multiple sector readwrite. If your IDE hard drive supports block mode (most new drives do), select Enabled for automatic detection of the optimal number of block readwrite per sector the drive can support.

- The Choice: Disabled or Enabled .

☞ **Power Management Setup**

The Power Management Setup allows you to configure your system to most effectively saving energy while operating in a manner consistent with your own style of computer use.

ACPI Function

This item allows you to enable/disable the Advanced Configuration and Power Management (ACPI)

- The choice: Enabled or Disabled.

ACPI Suspend Type

This item allows you to select sleep state when suspend.

- The choice: S1(POS), or S3(STR) or S1&S3.

Power Management Option

This category allows you to select the type (or degree) of power saving mode settings.

- Min Saving** Minimum power management.
 HDD Power Down = Allows you to set each mode individually.
 Suspend Mode = 1 hr.

Max Saving Maximum power management.
HDD Power Down = Allows you to set each mode individually.
Suspend Mode = 1 min.

User Define Allows you to set each mode individually.
HDD Power Down = Disabled or in. ~ 15min.
Suspend Mode = Disabled or 1 min ~ 1 hr.

➤ The choice: User Define, Min Saving, or Max Saving.

HDD Power Down

When this item enabled and after the set up time of system inactivity, the hard disk drive will be powered down while all other devices remain active.

➤ The choice: Disabled or 1 Min ~ 15 Min.

Suspend Mode

When this item enabled and after the set up time of system inactivity, all devices except the CPU will be shut off.

➤ The choice: Disabled, 1 Min, 2 Min, 4 Min, 6 Min, 8 Min, 10 Min, 20 Min, 30 Min, 40 Min, or 1 Hour.

Video Off Option

When enabled, this feature allows the VGA adapter to operate in a power saving mode.

Always On Monitor will remain on during power saving mode.

Suspend -> Off Monitor is blanked when the system enters the Suspend mode.

➤ The choice: Always On or Suspend -> off.

Video Off Method

This determines the manner in which the monitor is blanked.

VH SYNC + Blank This selection will cause the system to turn off the vertical and horizontal synchronization ports and write blanks to the video buffer.

Blank Screen This option writes blanks to the video buffer.

DPMS Support Initial display power management signaling.

➤ The choice: Blank Screen, VH SYNC + Blank, or DPMS Support.

MODEM Use IRQ

This determines the IRQ which the MODEM can use.

- The choice: NA,3, 4, 5, 7, 9, 10, or 11.

Soft-Off by PWRBTN

Pressing the power button for more than 4 seconds forces the system to enter the Soft-Off state when the system has "hung".

- The choice: Delay 4 Sec or Instant-Off .

Wakeup After PWR-Fail

Use this item to indicate what you expect to happen after a power failure has occurred.

- The choice: Auto, On, or Off.

IRQ/Event Activity Detect

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

PS2KB Wakeup Select

Enables you to allow keyboard activity to awaken the system from power saving mode.

- The choice: Disable or Enabled.

PS2KB Wakeup from S3

This option enables you to allow keyboard or mouse activity to awaken the system from power saving mode.

- The choice: ctrl+F1 ~ F12 , Power, Wake , or Any key

PS2MS Wakeup from S3

This option enables you to allow keyboard or mouse activity to awaken the system from power saving mode.

- The choice: Disable or Enabled.

USB Resume from S3

When set to Enabled, the system power will resume the system from a power saving mode if there is any USB port activity.

- The choice: Disable or Enabled.

VGA

When this item enabled, you can set VGA to awaken the system.

- The choice: OFF or ON.

LPT & COM

When LPT & COM stays On, any activity from one of the listed system peripheral devices or IRQs wakes up the system.

- The choice: NONE, LPT, COM, or LPT/COM.

HDD & FDD

When HDD & FDD stays On, any activity from one of the listed system peripheral devices wakes up the system.

- The choice: OFF or ON.

PCI Master

When PCI Master stays On, any activity from one of the listed system peripheral devices wakes up the system.

- The choice: OFF, or ON.

PowerOn by PCI Card

This item enables/disables the power on function of PCI Card.

- The choice: Disabled or Enabled.

Wake Up On LAN/Ring

Use this item to enable LAN or modem activity to wakeup the system from a power saving mode.

- The choice: Disable or Enabled.

RTC Alarm Resume

When this item enabled, you can set the date and time at which the RTC (real-time clock) alarm awakens the system from Suspend mode.

- The choice: Disabled or Enabled.

Data (of Month)

This item selects the alarm date.

- Key in a DEC number:Min = 0, Max = 31.

Resume Time (hh:mm:ss)

This item selects the alarm Time.

[hh]

- Key in a DEC number:Min = 0, Max = 23.

[mmss]

- Key in a DEC number:Min = 0, Max = 59.

IRQs Activity Monitoring

Primary INTR

Press Enter to on/off the wake up ability of a specified IRQ.

➤ The choice: OFF, or ON.

In the following is a list of IRQ's, Interrupt ReQuests, which can be exempted much as the COM ports and LPT ports above can. When an IO device wants to gain the attention of the operating system, it signals this by causing an IRQ to occur. When the operating system is ready to respond to the request, it interrupts itself and performs the service.

When On mode exist, activity will neither prevent the system from going into a power management mode nor awaken it.

IRQ3 (COM 2)

IRQ4 (COM 1)

IRQ5 (LPT 2)

IRQ6 (Floppy Disk)

IRQ7 (LPT 1)

IRQ8 (RTC Alarm)

IRQ9 (IRQ2 Redir)

IRQ10 (Reserved)

IRQ11 (Reserved)

IRQ12 (PS 2 Mouse)

IRQ13 (Coprocesor)

IRQ14 (Hard Disk)

IRQ15 (Reserved)

➤ The choice: Disabled or Enabled.

☞ **PnP/PCI Configurations**

This section describes the configuration of PCI bus system. PCI or Personal Computer Interconnection is a system which allows IO devices to operate at the speed CPU itself keeps when CPU communicating with its own special components.

This section covers some very technical items, and it is strongly recommended that experienced users should make any changes to the default settings.

PNP OS Installed

This item allows you to determine PnP OS is installed or not.

- The choice: No or Yes .

Reset Configuration Data

Normally, you leave this field Disabled. Select Enabled to reset Extended System Configuration Data (ESCD) when you exit from Setup if you have installed a new device or software and the system reconfiguration has caused such a serious conflict that the operating system can not boot.

- The choice: Disable or Enabled.

Resource controlled By

The Award Plug-and-Play BIOS has the capacity to automatically configure all of the boot and Plug-and-Play compatible devices. However, this capability means absolutely nothing unless you are using a Plug-and-Play operating system such as Windows 95. If you set this field to "manual" , choose specific resources by going into each of the If you set this field to "manual" , choose specific resources by going into each of the sub-menu that follows this field (a sub-menu is preceded by a ">").

- The choice: Auto(ESCD) or Manual.

IRQ Resources

When resources are controlled manually, assign each system interrupt a type, depending on the type of device using the interrupt.

IRQ3/4/5/7/9/10/11/12/14/15 assigned

This item allows you to determine the IRQ assigned to the ISA bus and is not available to any PCI slot. Legacy ISA for devices is compliant with the original PC AT bus specification; PCIISA PnP for devices is compliant with the Plug-and-Play standard whether designed for PCI or ISA bus architecture.

- The choice: PCI Device or Reserved.

PCI/ VGA Palette Snoop

It determines whether the MPEG ISA/ VESA VGA Cards can work with PCI/ VGA or not. If you have MPEG ISA/ VESA VGA Cards and PCI/ VGA Card worked, Enable this field. Otherwise, please Disable it.

- The choice: Disable or Enabled.

Assign IRQ For VGA

This item allows the user to set VGA IRQ Routing table Enabled or Disabled.

- The choice: Disable or Enabled.

Assign IRQ For USB

This item allows the user the option to assign an IRQ to on-board USB controller.

Since the on-board controller is always enabled, if no IRQ is assigned to it, there will be a question mark report on the sytem device under Windows95/98.

- The choice: Disable or Enabled.

☞ **PC Health Status**

Shutdown Temperature

Enables you to set the maximum temperature the system can reach before powering down.

- The choice: 60° C/140° F, 65° C/149° F, 70° C/158° F, Disabled.

System Component Characteristics

These fields provide you with information about the systems current operating status. You cannot make changes to these fields.

The fields include

CPU V-core

+ 2.5V

+ 3.3V

+ 5V

+ 12V

Voltage Battery

Current System Temp

Current CPU Temp

CPUFAN1

CASFAN 1

☞ **FrequencyVoltage Control**

Auto Detect PCI/DIMM Clk

This item allows you to enable/disable auto detection PCI/DIMM Clock.

- The choice: Enabled or Disabled.

Spread Spectrum

This item allows you to enable/disable the spread spectrum modulation.

- The choice: Disabled or Enabled .

CPU Host/AGP/PCI Clock

This item is used for overclocking only.

- The choice: Default, 100/66/33 HMz, 105/70/35 HMz, 111/74/37 HMz, 114/76/38 HMz, 120/80/40 HMz, 126/84/42 HMz, 130/87/43 HMz, 133/66/33 HMz, 136/68/34 HMz, 140/70/35 HMz, 144/72/36 HMz

☞ **Load Fail-Safe Defaults**

When you press <Enter> on this item, you will get a confirmation dialog box with a message similar to:

Load Fail-Safe Defaults (Y/N) ? N

Pressing 'Y' loads the BIOS default values for the most stable, minimal performance system operations.

☞ **Load Optimized Defaults**

When you press <Enter> on this item, you will get a confirmation dialog box with a message similar to:

Load Optimized Defaults (Y/N) ? N

Pressing 'Y' loads the default values that are factory-set for optimal performance system operation.

☞ Supervisor/ User Password Setting

You can set either supervisor or user password, or both of them. The differences between them are:

Set Supervisor Password and User Password

The options on the Password screen menu make it possible to restrict access to the Setup program by enabling you to set passwords for two different access modes: Supervisor mode and User mode.

In general, Supervisor mode has full access to the Setup options, whereas User mode has restricted access to the options. By setting separate Supervisor and User password, a system supervisor can limit who can change critical Setup values.

Enter Password

Type the password up to eight characters, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable password, just press <Enter> when you are prompted to enter password. A message will confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

Password Disable

If you select System at Security Option of BIOS Features Setup Menu, you will be prompted in entering the password whenever the system is rebooted or you try to enter Setup. If you select Setup at Security Option of BIOS Features Setup Menu, you will be prompted when you try to enter Setup.

Warning: Retain a record of your password in a safe place. If you forget the password, the way to access the system is to clear CMOS, please refer to "Clear CMOS" on page 28.

Save & Exit Setup

Pressing <Enter> on this item asks for confirmation:

Save to CMOS and EXIT (Y/N)? Y

Pressing "Y" stores the selections made in the menus of CMOS - a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS. After saving the values the system is restarted again.

Exit Without Saving

Pressing <Enter> on this item asks for confirmation:

Quit without saving (Y/N)? N

This allows you to exit from Setup without storing in CMOS any change. The previous selections remain in effect. This exits from the Setup utility and restarts your computer.
