

Please install with reference to the following steps:

! For safety reasons, please ensure that the power cord is disconnected before opening the case.

1. Take the wifi module thermal pads out from the small bag on EPE.
2. Unscrew the ten screws of the chassis cover and remove it.

3. Follow (A) or (B) to install the wifi module and thermal pad.

(A) With 2nd LAN: Place the 2nd LAN daughterboard in the chassis and fasten the screw, then install an wifi module in the relevant slot on the daughterboard and tighten the screw with bolt firmly. As shown, connect the two antenna cables to "MAIN" and "AUX" on the wifi module and affix with the insulation tape, have to put the two pcs thermal pads on the wifi module.

(B) Without 2nd LAN: install an wifi module in the relevant slot on the motherboard and tighten the screw with bolt firmly. As shown, connect the two antenna cables to "MAIN" and "AUX" on the wifi module and affix with the insulation tape, have to put the three pcs thermal pads on the wifi module.

4. Please replace and affix the chassis cover with ten screws.
